

INFORMATION AND CONSENT TO THE EXECUTION OF THE ANTIGENIC AND / OR MOLECULAR TEST

The rapid antigen test is performed by means of a nasal swab with sampling of the superficial cells of the mucosa inside the nose using a small stick of synthetic material that can hold a lot of organic material. The collection is performed in a few seconds and has minimal invasiveness, originating, at most, a slight discomfort at the point of contact. In the test it is read after 15 minutes. In case of positivity, it is necessary for diagnostic confirmation to perform a molecular swab. In this case the procedure consists in the removal of the superficial cells of the mucosa of the posterior pharynx (part back of the mouth) and nasopharynx (inside the nose); also in this case the withdrawal comes performed in seconds and has minimal invasiveness. The swab is sent to the laboratory for analysis search for viral RNA.

SELF-DECLARATION AND CONSENT TO PERFORM THE ANTIGENIC AND / OR MOLECULAR TEST

ADULT DATA

The undersigned _____
born in _____ on ____ / ____
____ / ____
identity document n ° _____ n ° _____ issued by _____
CF _____ agrees to the execution
on if
himself and / or as a parent or exercising parental authority over the following minor:

MINOR DATA

Surname and name _____
born in _____ on ____ / ____
____ / ____
identity document n ° _____ n ° _____ issued by _____
CF _____
Place _____, li ____ / ____ / 2021

Signature _____

(do not fill in the part below)

OUTCOME:

NEGATIVE

POSITIVE
